

# Demonstrating IMPACT in Action With OSHI HEALTH®

## THE FACTS

- » [Twenty million](#) Americans suffer from chronic digestive diseases, the 2nd leading cause of absenteeism and presenteeism behind colds.
- » The traditional care system incentivises gastroenterologists to **focus on procedures and medication therapy**.
- » Health systems do not have the personnel, nor incentives, to provide higher touchpoint chronic care.
- » [Most](#) (71%) GI patients are not satisfied with their current care, causing many to **give up on preventive care**.

## THE COMPANY'S SOLUTION

- » [Oshi Health](#), an [IMPACT](#) member, is a **fully virtual GI clinic** focused on goal-directed, whole-person care.
- » The **purpose-built care team**, which includes dietitians, GI-specialized behavioral therapists, health coaches, nurse practitioners, and gastroenterologists, helps patients achieve symptom control goals and **reduce downstream health services utilization**.
- » Oshi Health provides integrated care that **complements services** provided in traditional care settings and helps [coordinate care](#) when in-person care is needed.
- » By partnering with imaging, lab, and procedural and surgery providers, Oshi augments the traditional health care system by filling a gap with its **ancillary V1C support at scale**.

## WHY IT MATTERS

- » With their value-based care focus, Oshi's [incentives are aligned](#) for whole-person care that is complementary to traditional brick-and-mortar GI care, which creates the [necessary environment](#) for a trusting partnership with referring providers, and encourages effective V1C care transitions.

### The IMPACT Resource to Use

Building a patient journey that leverages effective transitions between brick-and-mortar and V1C care can be done by **using the [V1C Care Transitions Toolkit](#)**, which shows how to successfully integrate V1C into the current healthcare system.
