GENERATES EVIDENCE

DiMe RESEARCH

FACILITATES COLLABORATIONS

PROMOTES EDUCATION

The [DiMe Research Committee](#) is a member-led initiative that stands up working groups to pursue research questions proposed directly by the DiMe member community.

The Problem

» A clear process for reporting adherence to digital solutions in publications did not exist, limiting the value of published data.

» We wanted to connect back to EVIDENCE to showcase that a similar model might also be applied to reporting digital studies of adherence.

The EVIDENCE checklist provides a clear process for authors to follow throughout study design, data collection, analysis, and reporting.

— Jessie Bakker, MS PhD,
    Executive Vice President of Medical Affairs,
    Signifier Medical Technologies Ltd

The Resources

» We reviewed the [EVIDENCE checklist](#) to understand what the authors had recommended in terms of reporting adherence to BioMeTs and ensure that our recommendations were consistent with EVIDENCE.

» Alternatively, if we noted substantial deviations between EVIDENCE and our recommendations, we could provide a rationale.

» We adopted this same model as we developed recommendations for reporting adherence, which strengthened our resulting manuscript.

The Impact

✓ The checklist provided a model for developing recommendations for reporting adherence.

✓ We were able to ensure our guidance was consistent across other related research efforts.
